

Abstract:

Standard Test Methods for Sandwich Composites

ZwickRoell GmbH & Co. KG, Dr. Hannes Körber

Sandwich composites are widely used in areas where lightweight design is a key requirement, e.g. aerospace, transportation, wind energy or yacht building. In addition, industrial engineering and construction are common areas of application. In this presentation, you will learn about the distinct group of standard test methods and testing solutions offered by ZwickRoell to determine the static mechanical properties of the sandwich facing, the sandwich core material or the entire sandwich composite.
